

Open plan

enabled by Automist®

Automist provides enhanced fire protection to meet building regulations in homes with open plan interiors.

Open plan layouts enabled by Automist®

Airy, spacious, free-flowing open plan layouts are highly prized, adding thousands to the value of a home. However some open plan designs may require compensatory fire protection measures to gain building control approval. Automist is an automatic fire suppression system that is being used by a growing number of homeowners and architects to meet building regulations, whilst enabling open plan layouts.

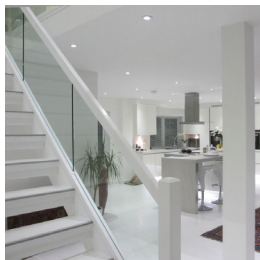

Open plan kitchen diner

Introducing an open plan kitchen lounge and adding a new bedroom to this modern apartment required additional fire safety measures. Automist was selected to ensure the property was fully protected.

Stylish loft conversion

This London flat was given a new lease of life with a complete loft renovation creating extra space, and a new kitchen area and bathroom. Automist enhanced safety whilst complementing the modern design.

Sprinkler alternative

Automist was the ideal solution for this 5 bedroom, detached, new build property in Port Erin, providing a seamless and almost invisible watermist fire suppression system, with no need for a water tank.

A grand design

As featured on Channel 4's Grand Designs, this spectacular wavy wooden house has interior walls covered with woodland timber. Automist was utilised to ensure the property met building regulations.
