SHUTGUN

SHUTS OFF FIRE SPRINKLERS FAST

•UNIVERSAL DESIGN

Works on exposed, semi-recessed, pendent, horizontal sidewall and upright sprinklers

•SAVE TIME & MONEY

Designed and tested to shut off activated sprinkler heads instantly. The Shutgun is the best defense against the hazardous and expensive effects of water damage.

•COST OF WATER DAMAGE

Water flows from a sprinkler head at 25 gallons per minute
The residual damage can cost up to \$1,000 per minute left running

•FAST AND EASY

One hand activation makes it safe and easy to use.

•SAFETY FIRST

Incorporates a fusible link that will release in case of a fire -and reactivate the sprinkler.

SHEARED HEAD ATTACHMENT

Fits over the top of a broken sprinkler frame allowing the Shutgun to stop water from sheared heads too.

SHUTGUN

SHUTS OFF FIRE SPRINKLERS FAST

HOW IT WORKS:

When a sprinkler activates accidentally, the shutgun is designed to stop the flow of water from the sprinkler head.

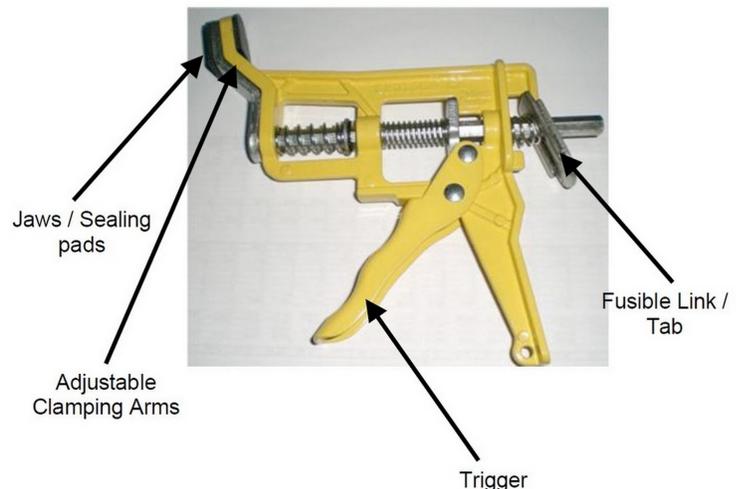

The rubber stopper on the upper and lower end of the opening fits inside the orifice to shut off the flow of water.

Simply insert the end of the Shutgun into the sprinkler vertically, and pull the trigger.

A spring works like a caulk gun - opens inside the head, forcing the rubber into the opening where the water is running out.

Once you have a tight seal, you can leave the shutgun in-place until you have shut off the water supply.

In the case of an actual fire, the fusible link will release the shutgun and the sprinkler head will activate once again.
