

Open plan loft-conversions

enabled by Automist®

There's a lot of demand for open plan living but building regulations can make it difficult for them to get approval. Automist is a discrete, easy to install sprinkler alternative, trusted in over 10,000 installations. It is covered by an LABC Registered Detail ([EW171](#)), allowing rapid local authority building control approval for open plan loft converted houses.

Plumis

Ten years ago, retrofitting sprinklers would have been very unusual, but today, Automist is a discrete easy to retrofit alternative which is installed in thousands of homes every year. It can be installed with reduced plumbing requirements, no tank or commercial water supply required, and less disruption because it uses flexible hosing and does not have to be fitted in the ceiling.

“Engage your sprinkler company early on – it can really alleviate stress on design and help you meet clients demands”

JP – Visionary Lofts

Why not become one of the many loft conversion companies who are working with Automist Accredited Installers to offer their clients modern open plan living.

Why Open Plan?

+ Beautiful

impressive open spaces are lighter, tend to be aesthetically more pleasing.

+ Practical

if you want to host a dinner for ten, one large room is going to work much better than two small reception rooms. Sometimes you just need a larger space.

+ Adds value

Robert Nichols, Managing Director of Portico London Estate Agents, claims a roughly 4% price uplift simply by creating an open-plan kitchen-diner.
